

Our thanks to Captain Carlos Reynoso and the entire Hollister CA Police Department for sharing this award with Drakontas. We are proud to be a part of their team and to have the opportunity to help make the 2015 Hollister Bike Rally and their day-to-day policing more safe and effective through the use of DragonForce.

November 4, 2015

City of Hollister project -- Using technologically advanced video surveillance cameras coupled with the use of intelligent real-time applications and team collaboration tools [DragonForce], the City of Hollister Police Department revolutionized the management, resource deployment and information delivery to provide security for its highly popular and heavily attended 2015 Hollister Bike Rally. With public safety at stake, the Hollister Police Department implemented a location based social media monitoring platform that automatically monitored, gathered and archived all public social media content in and around Downtown Hollister. This approach complemented the extensive array of IP video surveillance cameras used by public safety agencies. Now also armed with location based intelligence the Police Department was able to monitor, engage and analyze social media feeds in real-time from the Rally. The Department started with the locations that matter most; such as the Beer Gardens and Outlaw Motorcycle Club gathering locations to increase situational awareness, reduce response time, and assist first responders.

Very few police departments have “truly integrated” their policy and technology layers in a “Common Operating Picture” that brings together a unified command and control system and delivers real-time information to first responders as well as to their distributed command layer. The Hollister Police Department was able to deliver and share all information that was available to deployed officers at the Rally in an appropriate and important timeframe from all relevant sources.

About Drakontas

Drakontas builds mission-critical team collaboration software applications for public safety and enterprise customers. Our flagship application – DragonForce – provides teams of mobile users an integrated set of communication and collaboration capabilities that include: real-time personnel tracking, file sharing, secure text messaging, incident reporting, digital forms and a unique collaborative whiteboard capability that allows teams of users to draw together on maps, floor plans and pictures. DragonForce runs on both Android and iOS smartphones and tablets as well as standard web browsers. From ordinary to extraordinary events and operations, DragonForce gives teams the common operating picture they need, empowering them to achieve their mission objectives more quickly, safely and effectively.
